Beam Design - ridge post support beam

1. Beam Data

Load Type:	Single Point Load
Support:	Simple Beam
Beam Type:	Glulam
Species:	Western Species
Grade:	24F-V4 1.8E DF/DF
Size:	5.5 x 16.5
Design Span (L):	26.58 ft.
Clear Span:	26.17 ft.
Total Span:	27.00 ft.
Bearing (l_b):	5 in.
Quantity (N):	1

2. Design Loads

Live Load:	2873 lbs
Dead Load:	1726 lbs
Selfweight:	594.2 lbs
Dist. Selfweight:	22.35 plf
Total Weight:	603.5 lbs

3. Design Options

Lateral Support:	unbraced
Defl. Limits:	360|240
Load Duration:	1.15
Exposure:	wet
Temperature:	T <= 100°F
Orientation:	Vertical

4. Design Assumptions and Notes

Code Standard: IBC 2015, NDS 2015

Bending Stress: Parallel to Grain

Notes:

5. Adjustment Factors

Factor	Description	F_b	F_t	F_v	F_c	$F_{c\perp}$	E/E_{min}
C_D	Load Duration Factor	1.15	1.15	1.15	1.15	-	-
C_M	Wet Service Factor	0.8	0.8	0.875	0.73	0.53	0.833
C_t	Temperature Factor	1	1	1	1	1	1
C_L	Beam Stability Factor	0.920	-	-	-	-	-
C_V	Volume Factor	0.939[b]	-	-	-	-	-
C_{fu}	Flat Use Factor	N/A[c]	-	-	-	-	-

a) Adjustment factors per AWC NDS 2015 and NDS 2015 Supplement.

b) The volume factor, C_V, shall not apply simultaneously with the beam stability factor, C_L. The lesser factor shall apply.

c) Only applies when glulam beam is loaded in bending about the y-y axis.

6. Beam Calculations

Determine reference design values, sectional properties and self weight of beam:

A = b x d

$$S_x = \frac{bd^2}{6},\ S_y = \frac{b^2d}{6}$$

$$I_x = \frac{bd^3}{12},\ I_y = \frac{b^3d}{12}$$

where:

b = Breadth of rectangular beam in bending (in.)
d = Depth of rectangular beam in bending (in.)
A = Cross sectional area of beam (in.^{2})
S_x = Section modulus about the X-X axis (in.^{3})
S_y = Section modulus about the Y-Y axis (in.^{3})
I_x = Moment of inertia about the X-X axis (in.^{4})
I_y = Moment of inertia about the Y-Y axis (in.^{4})

b = 5.500 in.
d = 16.500 in.
A = 5.500 x 16.500 = 90.75 in.^{2}
$S_x = (5.500)(16.500)^2/6 = 249.56$ in.^{3}
$S_y = (5.500)^2(16.500)/6 = 83.19$ in.^{3}
$I_x = (5.500)(16.500)^3/12 = 2058.89$ in.^{4}
$I_y = (5.500)^3(16.500)/12 = 228.77$ in.^{4}

Reference Design Values from Table 5A NDS Supplement (Reference Design Values for Structural Glue Laminated Softwood Timber Combinations).

Species & Grade	F_{bx}+	F_{bx}-	$F_{c\perp x}$	F_{vx}	E_x	E_{minx}	F_{by}	$F_{c\perp y}$	F_{vy}	E_y	E_{miny}	F_t	F_c	G
24F-V4 1.8E DF/DF	2400	1850	650	265	1800000	950000	1450	560	230	1600000	850000	1100	1650	0.5

The following formula shall be used to determine the density of wood (lbs/ft^3. *(NDS Supplement Sec. 3.1.3)*

$$\rho_w = 62.4\left[\frac{G}{1+G(0.009)(m.c)}\right]\left[1+\frac{m.c.}{100}\right]$$

where:

ρ_w = Density of wood (lbs/ft^3
G = Specific gravity of wood (dimensionless)
m.c. = Moisture content of wood (percentile)

G = 0.5
m.c. = 28 % (Estimated moisture content at wet service conditions)

STRUCTURAL ENGINEERS COMPANY LOGO

$$\rho_w = 62.4\left[\frac{0.5}{1+0.5(0.009)(28)}\right]\left[1+\frac{28}{100}\right] = 35.47 \text{ lbs/ft}^3$$

$\text{Volume}_{\text{total}} = N[A \times (L + l_b)] = 1 \times [90.75 \times (319.00 + 5)] \times (12 \text{ in./ft.})^3 = 17.02 \text{ ft}^3$
$\text{Volume}_{\text{span}} = N[A \times L] = 1 \times [90.75 \times 319.00] \times (12 \text{ in./ft.})^3 = 16.75 \text{ ft}^3$

Total Weight (W_T) = ρ_w x $\text{Volume}_{\text{total}}$ = 35.47 x 17.02 = 603.5 lbs
Self Weight (W_S) = ρ_w x $\text{Volume}_{\text{span}}$ = 35.47 x 16.75 = 594.2 lbs

Distributed Self Weight (w_s) = $\frac{W_S}{L} = \frac{594.2}{26.58}$ = 22.35 plf

1.) Bending:

Members subject to bending stresses shall be proportioned so that the actual bending stress or moment shall not exceed the adjusted bending design value:

$f_b \leq F_b'$ *(NDS Sec. 3.3.1)*

where:

$f_b = M / S$

$F_{bx}' = F_{bx}(C_D)(C_M)(C_t)(C_V)$ or $F_{bx}' = F_{bx}(C_D)(C_M)(C_t)(C_L)$

Beam is unbraced along its compression edge, lateral stability is considered below:

Slenderness Ratio for bending member R_B:

l_u = Unbraced Length = 26.583 ft.

$$l_u/d = \frac{318.996}{16.5} = 19.33$$

$l_e = 1.37l_u + 3d = 1.37(319.0) + 3(16.5) = 486.52$ in. $= 40.54$ ft. *(NDS Table 3.3.3)*

$$R_b = \sqrt{\frac{l_e d}{b^2}} = \sqrt{\frac{486.52(16.5)}{(1 \times 5.5)^2}} = 16.29$$

$R_b = 16.29 < 50$? **OK**

Euler-based ASD critical buckling value for bending members:

$E_{miny}' = E_{miny}(C_M)(C_t) = 850000(0.833)(1) = 708050$ psi

$$F_{bE} = \frac{1.2E'_{miny}}{(R_b)^2} = \frac{1.2(708050)}{(16.29)^2} = 3201.71 \text{ psi}$$

$F_{bx}^* = F_{bx}(C_D)(C_M)(C_t) = (2400)(1.15)(0.8)(1) = 2208.00$ psi

Beam stability factor:

$$C_L = \frac{1 + F_{be}/F^*_{bx}}{1.9} - \sqrt{\left(\frac{1 + F_{be}/F^*_{bx}}{1.9}\right)^2 - \frac{F_{be}/F^*_{bx}}{0.95}} = \frac{1 + 3201.71/2208.00}{1.9} - \sqrt{\left(\frac{1 + 3201.71/2208.00}{1.9}\right)^2 - \frac{3201.71/2208.00}{0.95}} = 0.920$$

$$C_V = \left(\frac{21}{L}\right)^{0.1}\left(\frac{12}{d}\right)^{0.1}\left(\frac{5.125}{b}\right)^{0.1} = \left(\frac{21}{26.583}\right)^{0.1}\left(\frac{12}{16.5}\right)^{0.1}\left(\frac{5.125}{5.5}\right)^{0.1} = 0.939$$

Lateral stability governs over volume effect:

$C_L = 0.920 < C_V = 0.939$

$F_{bx}' = (2400)(1.15)(0.8)(1)(0.920) = 2031.6$ psi

$$f_b = \frac{M}{N \times S_x} = \frac{390458}{1 \times 249.56} = 1564.6 \text{ psi}$$

$f_b = 1564.6$ psi $< F_{bx}' = 2031.6$ psi (CSI = 0.77) ? **OK**

2.) Shear:

Members subject to shear stresses shall be proportioned so that the actual shear stress parallel to grain or shear force at any cross section of the bending member shall not exceed the adjusted shear design value:

$f_v \leq F_v'$ *(NDS Sec. 3.4.1)*

where:

$$f_v = \frac{3V}{2A}$$

$F_v' = F_v(C_D)(C_M)(C_t)$

$F_{vx}' = (265)(1.15)(0.875)(1) = 266.66$ psi

Shear Reduction: Uniformly distributed loads within a distance, d, from supports equal to the depth of the bending member shall be pemitted to be ignored. Concentrated loads within a distance equal to the depth of the bending member from supports shall be permitted to be multiplied by x/d where x is the distance from the beam support face to the load. See NDS 2015, Figure 3C.

$$f_v^* = \frac{3V^*}{2(N \times A)} = \frac{3(2565.85)}{2(1 \times 90.75)} = 42.41 \text{ psi}$$

STRUCTURAL ENGINEERS COMPANY LOGO

This report may not be copied, reproduced or distributed without the written consent of Engineering Company Inc.

Copyright © 2024

f_v* = 42.41 psi < F_{vx}' = 266.66 psi (CSI = 0.16) ? **OK**

No Reduction in Shear (conservative):

$$f_v = \frac{3V}{2(N \times A)} = \frac{3(2596.59)}{2(1 \times 90.75)} = 42.92 \text{ psi}$$

f_v = 42.92 psi < F_{vx}' = 266.66 psi (CSI = 0.16) ? **OK**

3.) Deflection:

Bending deflections calculated per standard method of engineering mechanics for live load and total load:

LL Allowable: L/360
TL Allowable: L/240

$E_x' = E_x(C_M)(C_t) = 1800000(0.833)(1) = 1499400$ psi

$$\Delta_{LL} = \frac{P_{LL}L^3}{48E_x'(N \times I_x)} = \frac{(2873)(26.583)^3}{48(1499400)(1 \times 2058.89)} \times \left(12\frac{in.}{ft.}\right)^3 = 0.63 \text{ in.}$$

$(L/d)_{LL}$ = 319.00 / 0.63 = 507

Δ_{LL} = 0.63 in = L/507 < L/360 ? **OK**

$$\Delta_{TL} = = \left[\frac{5(22.35)(26.583)^4}{384(1499400)(1 \times 2058.89)} + \frac{(4599)(26.583)^3}{48(1499400)(1 \times 2058.89)}\right] \times \left(12\frac{in.}{ft.}\right)^3 = 1.09 \text{ in.}$$

$(L/d)_{TL}$ = 319.00 / 1.09 = 293

Δ_{TL} = 1.09 in = L/293 < L/240 ? **OK**

4.) Bearing:

Members subject to bearing stresses perpendicular to the grain shall be proportioned so that the actual compressive stress perpendicular to grain shall be based on the net bearing area and shall not exceed the adjusted compression design value perpendicular to grain:

$f_{c\perp} \leq F_{c\perp}'$ *(NDS Sec. 3.10.2)*

where:

$$f_{c\perp} = \frac{R}{A_b}$$

$F_{c\perp}' = F_{c\perp}(C_M)(C_t)$

$F_{c\perp x}' = (650)(0.53)(1) = 344.50$ psi

This report may not be copied, reproduced or distributed without the written consent of Engineering Company Inc.

Copyright © 2024

$A_b = b \times l_b = 5.5 \times 5 = 27.50 \text{ in}^2$

$$f_{c\perp} = \frac{R}{N \times A_b} = \frac{2601.24}{1 \times 27.50} = 94.6 \text{ psi}$$

$f_{c\perp} = 94.6 \text{ psi} < F_{c\perp x}' = 344.50 \text{ psi}$ (CSI = 0.27) ? **OK**
